

# Chelveston Village Hall

## BlueTooth Receiver Instructions

1. There are two BlueTooth receivers, one at each end of the Hall. Either can be used but the other should be switched off with its audio cable unplugged from the wall.
2. Turn on sound system in the store room and wait for the “clunk” from the speakers.
3. If there is no light on the BlueTooth receiver (or just a red charging light) switch it on by pressing the button gently for 2-3 seconds. You should hear short sequence of notes with a rising frequency and the light will go blue or purple.
4. If there is a sequence of notes with a decreasing frequency, you have just switched it off!
5. Get your phone ready on the BlueTooth screen and then press the button on the receiver twice (quickly) to start pairing.
6. You should see the device “ESKA-ET03” or “BTI-041” appear depending on which receiver you are using.
7. Click on this to pair and then test with some music.
8. If you have previously paired to the system, then you should reconnect automatically.
